Add an asset to the management node	
-------------------------------------	--

### Add an asset to the management node

You can add compute and controller assets to the management node configuration using the REST API UI.

You might need to add an asset if you recently scaled your installation and new assets were not added automatically to your configuration. Use these APIs to add assets that are recent additions to your installation.

#### Before you begin

- Ensure that your cluster version is running NetApp Element software 11.3 or later.
- Ensure that you have deployed a management node running version 11.3 or later.

#### About this task

(NetApp HCI only) If you do not see compute nodes in Hybrid Cloud Control (HCC) after scaling your NetApp HCI system, you can add a compute node using the POST /assets/{asset\_id}/compute-nodes described in this procedure.

#### Steps

1. Access the REST API UI for management services by entering the management node IP address followed by /mnode:

https://[IP address]/mnode

- 2. Click **Authorize** or any lock icon and complete the following:
  - a. Enter the cluster user name and password.
  - b. Enter the client ID as mnode-client.
  - c. Click **Authorize** to begin a session.
  - d. Close the window.
- 3. To add a compute node or controller sub-asset to an existing base asset, click one of the following.

Your installation has a base asset configuration that was created during installation or upgrade.

Option	Description
POST /assets/{asset_id}/ controllers	Run this command to create a controller sub-asset.
POST /assets/{asset_id}/ compute-nodes	Run this command to create a compute node sub-asset.

4. Click **Try it out**.

5. Enter the required payload values as defined in the **Model** tab.

For compute node assets, remove the hardware\_tag parameter suggested in the payload example.

- 6. Enter the parent base asset ID in the **asset\_id** field.
- 7. Click Execute.
